

Think-Aloud transcript 1

So this would just be a bit of a prototype test with a think aloud task. So I will ask you to do some some basic things in the prototype. Ask you to just tell your thoughts, maybe things that are clear, unclear, things that you think are missing. It's not fully functional, so what I'm going to do is I'm actually going to share my screen of the prototype because it's not really easy to let you interact with it yet. And then I'm going to ask you what you want me to do. So I'm just going to click on whatever you want me to do. So I'm just going to get that ready. Let me see. All right. So everything is clear. You can read the words that you see and just the images and stuff. All right. So first of all, I just want to ask you without us starting with the interaction, what do you think this is for? So what do you think the purpose would be just based on what you see on this first screen?

I'm not sure if this is where I open a playlist of my recordings from other people or upload recording. Or is this more of something where I can like record things for other people? Or both?

Yes, exactly. So the main idea would actually be that it's kind of a platform in which you can, well, in the base, you would be able to upload recordings yourself and actually kind of put them into playlists. So it would be more individual right now. And for the next part, if you were to navigate to find a specific voice recording that you would want to listen to in a moment of homesickness, where would you go? As far as you can see in this? So please share your thoughts while navigating. If anything is unclear, let me know.

I think if I already have playlist, I hit playlist. Otherwise, just go to recordings.

Yeah. So and then let's imagine because it's not fully functional, you wanted to find a specific recording.

So moments at home. Yes, I can. I can click on this, for example, this playlist. It would take me to the playlist itself.

Yes, and actually, we get into a new image here. So what do you see right now on the screen? What do you think this is?

Uh, and this is just like a cover page?

Yeah. Okay. Yes. So in the top left, it says diary overview. Um, so the idea kind of here is that you have an album, which is at this point, it's called moments at home. Let's just imagine it's an album that you would use or that you created yourself. Um,

so on the left here, there's kind of a description of what the album means to you. Um, and you can, you can fill it in yourself. Um, so let me see.

So if I just go to here to the recordings..

I have made one that's actually clickable. Let's just imagine that's a recording that you would actually use. So it's your mom telling you about doing groceries, something very everyday, uh, you would actually end up here. So based on this screen, this diary page of a specific recording, um, are there any things that you see here that you would find useful, you think, or you would actually use if this was to be an actual thing or any negative, maybe redundant things, things that are unclear?

I don't know. I'm not sure if I, I feel like there's a lot of like clicking you need to do. I'm pretty lazy. Yeah. Uh, I feel like I kind of would prefer something more of a podcast format, like something that's like really seamless, get something out, open something, click something. Yeah. And then I can like continue, um, moving on my day. I'm not sure if it's possible because I feel like I have a lot of things to do. Yeah. It feels like it might be a bit too much to do. Yeah.

Um, okay. And let's see, uh, cause you're now in the, in the reflection kind of diary page. So this shows you, uh, for a specific recording, it shows you a general kind of description here, um, that you give to it once you upload a recording. And then this on the right, here's a reflection, which would be, for example, you listen to this every once in a while and you can add basically a diary entry of what you, what you, what made, made you listen to it that day, what you think about it that day. So as you can see, it's a bit more specific. Um, do you think that would be something that might seem useful to you? Um, or is there anything, uh, actually on this page that you would use anything missing?

Uh, I think, uh, maybe a general, a journaling app would be good. Um, like, uh, like one of these, like self care apps. Uh, I think, uh, for me personally, it would be good to have this, uh, this, this more of a, more of a feature embedded into an existing, um, sort of infrastructure. Yeah. Um, I, I'm not really, I think I have like a lot of like for a specific purpose apps and, um, might be too much to have. I don't know if I, I would trust myself to keep up with this. Yeah. Yea. Um, yeah. I, I don't think it has to be just homesickness. It could be like maybe more reframed as like a general mental, like a wellness sort of app. And if this is more of a wellness app, I guess then for me, um, I, I think it would be quite good. Yeah. Yeah. But for just homesickness, I'm not sure. Yeah. So do you think I tend to talk a lot more than write.

Okay. So you would think maybe actually an option to, allow for more talking, so, for example, put in voice notes, as now this is only written.

Yeah, for sure. So for example, um, you're having a bad day, you want to listen to this recording, um, and you do want to add a reflection, but it would be more like just press a button easily, uh, record something by talking and then you can, uh, have a, have a, an audio entry instead of a written entry. Maybe just a bit much to do yourself.

Yeah. Okay. Yeah. And I understand. Um, let me see. So do you think in general, um, this is kind of, uh, clear here, what I did in this screen because what I kind of made is an overview of diaries. Um, I wanted to be able to give the option to create either a diary for a playlist for a full playlist or just for a specific recording. Um, do you think if, if it were to be, uh, to be able to record voice instead of the written reflections, do you think you would use such a program or at least try it?

Yeah. I think what would be nice, just like to like easily create recordings over time. Cause, um, right now I'm still quite young. Um, it could be like, as I, uh, get older, I'd like to like be able to like kind of go through like memories. Yeah. Um, uh, from the past, for instance, like, uh, one thing that I think will be very nostalgic is like the, um, U-Bahn, uh, uh, like the subway system in my city right now. So I would like to create like a recording diary for that. Um, that would be really nice. Um, playlist diary, creating a playlist diary. Oh, it's like a book thing, uh, uh, page thing from earlier.

Yeah. So for example, with your, with your U-Bahn example, you could, for example, make a, make a playlist here literally called U-Bahn. It would pop up in your playlists and then you can, from there, you can click it, make like a diary, um, write something general. And of course you can always add more specific recordings if you want to. So yeah, you could, you could use it for that if it were to exist. Um, so yeah, for now it's kind of, um, kind of just this, it's more of just an idea showing you what it could be instead of it actually being something very functional already. Do you think there are specific elements that you can already see now that you think are kind of redundant or maybe unclear? You can also tell me to click on something.

I'm confused. I'm confused about the mom telling me about doing groceries, the shopping cart. Oh, the shopping carts for groceries, but that also looks like, um, Oh, okay. Yeah. This is like a user selected icon. Um, Oh, okay. Are there like dates for the recordings themselves?

Yeah. So there would be, there would be the idea. And then, uh, basically under here, you could specify between which date you would want to search. Right now I didn't implement it, but it could be the case that you want to search for a specific year or just for anything in the summer vacation of last year, anything like that. And then it would just kind of categorize itself based on that.

Yeah. I think the recording tags are nice. Create a tag. That's also nice. Uh, I'm confused about the click to see diary top, right? That's a bit, um, Yeah. Uh, yeah.

So it would bring you over here.

Oh, okay. Oh yeah. When you click to see diary, it's like, um, now I'm confused. Is it just one diary overall? That's like your library?

Yes.

Um, and then the library contains multiple playlists? Okay.

Yes. That would be the idea, but it's a bit unclear? Okay. Yeah. Thanks.

Uh, select recording diary. Um, create new recording diary. Uh, yeah, uh, here, I'm not sure if this is like, uh, just what a recording diary is because, uh, now like if the diary is just generally your overall library, that you have. Um, are you creating a new recording that also needs to be clear? Select recording diary. Um, could just be like record new diary entry.

Yeah. Okay. Yeah.

Or select. Yeah. And then the whole mom telling you about doing groceries is that specific thing that they're suggesting. Yeah.

Yeah. So that's kind of just a placeholder right now. Um, but you could, yeah, of course you could create your own recordings, give them names, give them the audio. Um, then just, as you already said, you could kind of choose the tags to go with it. So if you were to go to upload recording, um, you can actually create the tags here, choose from the tags that are already existing.

Okay.

So yeah, you could specify yourself, uh, what the recording kind of theme is.

Uh, okay. So if you go back to click to see diary, so the, um, the opening page. So what, what is the left most circle and select recording diary is supposed to, uh, do?

This one?

Yeah.

That kind of brings you to the diary entry of the recording. So if I were to go to the recording itself here in your full recording folder, okay. If you click on it here, you come to the same page.

Yeah. So I, I, I just don't understand the higher hierarchy right now. Of things. Like, um, why is there only one? Why, what about the one about like, uh, the weather or something? Why is it just the mom, uh, groceries, uh, button?

Yeah. exactly. Okay. Uh, let's see. Yeah. That's basically to show like the functionality, but also do you think the logic on how to get to this page is a bit unclear on where it takes you?

Yeah, Yeah. I, I don't, I don't understand what that is.

Yeah. Not really sure what the, what the button does just by looking at the text?

No.

Okay. Yeah. And what do you think based on what you can now see and interact with, um, what do you think would be useful for maybe coping with homesickness? If you think there is anything.

I think personally, um, um, a lot of people are very busy. Um, so what helps us to have something quite, uh, lightweight. Yeah. Um, I think like, um, I don't have as much time to do a lot of deliberate steps. Uh, I have, uh, I think, uh, there is a lot to work on like, uh, every day, like a little bit studying language, uh, not focusing on mental health and, um, this sort of thing. So yeah, I think what would be cool is like, if you could just, I guess under upload recording, you, if you can import audio from like existing videos, something like extract things. And, uh, here with the whole, um, a lot of the, uh, uh, like, um, typing and stuff always takes a bit of like, uh, uh, extra friction. Um, uh, with some AI tools and stuff, um, you can try to extract that, although that was quite expensive in a functionality perspective. Yeah. And that could maybe like, um, help with like the whole metadata. Cause what, what would be really nice is you have like some software that takes away as much of like the tap, tap, tap, um, sort of setup kind of as possible. Yeah. Um, that would be really helpful. Yeah. Yeah. Um, and yeah, with all, like you have like some sort of like visual diary or something, or creating tags. Yeah. I think overall you can have something like you can view the current library, view playlists and stuff. And, uh, if you have like suggested, like specific, like recent audios or something that you put on that like interface, um, not this page, but like the, the, the bigger one, but the two, uh, sections, then it helps to make it clear that it's like more of like, like a recent photo kind of like, uh, indication, obviously you can't see this in this prototype and that's okay. Um, yeah. Yeah. So I would also, um, yeah, I think like, for instance, like creating a new place, creating a new recording, it could, yes. Like these options right here. Probably. Yeah. I think those are, those can be like, maybe like more on the forefront. Okay. And then like the other like existing things, like existing, um, playlists or something like they can be like the next level. And then you have like these little floating icons or placeholders in your prototype. The same thing with like mom telling

me to do, uh, groceries. Maybe if you like add like two, three or more of like these like existing, uh, recordings, then you can like always indicate this is like, uh, some recent or, uh, popular or whatever, some sort of, uh, feature.

All right. Yeah. And just one question from me based on what you said, because you said it would be, I mean, the threshold to interact and actually use this would be, um, less high if you were able to put in audio as a reflection instead of typing. Do you think the best case would be to combine it? So give people the option to write it and to record it or to just keep it on the way.

Always. Always. Yeah. Um, one thing I forgot to mention, like in the very beginning, I did, like the contrast and stuff. Um, I'm not the type of researcher. Yeah. Like customize this sort of thing. Um, a lot of people who do like vision and, uh, uh, audio study, vision, audio accessibility, impairments in HCI, they often say that a lot of the stuff out there is really limited. Yeah. Um, I, I, I don't know that much, but I know there are a lot of existing things or like, uh, if you're colorblind or like that sort of thing. Yeah. Um, yeah. So like, I think if you give like options for like, uh, texting, um, voice message, voice to text, like, um, the transcriptions are pretty okay these days. Um, I don't know what's that extent.. I mean, it's always harder to implement obviously.

Um, yeah. But the option would be nice?

Right now I think Gemini is quite good.

Yeah exactly. Yeah. You can transcribe pretty decently already locally as well. So, um, okay. So that would be nice.

Yeah.

Yeah. All right. Um, yeah, that was basically it for now. I think. Yeah.

Hey, thanks for showing me. I'm happy to be part of your prototype iteration.

Yeah. No problem. No problem. Thank you so much. I'm gonna go right ahead and stop the recording.
